1. Introduction

Background

1.1 This Strategic Housing Land Availability Study (SHLAA) has been prepared by Cornwall Council as part of the evidence base for the Cornwall Local Plan. The study, (hereafter referred to as the Cornwall SHLAA 2013) builds on and refreshes the original Cornwall SHLAA and the Camborne/Pool/Illogan/Redruth published in March 2011 and November 2009. Whilst the original study focused solely on the main towns in Cornwall this new study extends the coverage to smaller towns and villages and also revisits the original assessment pulling the results together into a single document.

1.2 Due to the scale and nature of producing a SHLAA to cover the whole of Cornwall the Council took the decision to only re-access sites from the first study where new and more up to date information was available. These sites were then removed from the original study to ensure that sites were not double counted.

1.3 The study has been prepared by officers of Cornwall Council in consultation with a panel of developers, agents, and public bodies. The study broadly uses the same methodology which was developed for the Cornwall SHLAA 2011 by consultants in consultation with the Cornish councils at the time and local developers and stakeholders. The update reflects the methodology as promoted in the DCLG SHLAA Practice Guidance (July 2007). There are instances where the methodology differs from the good practice guidance. This has been necessary given the size of the Council and the practicalities of applying the methodology at this scale. These differences and the reasons for them are more fully explained in chapter 3.

1.4 The purpose of the assessment is to identify all available sites within the Cornwall study area which have the potential to accommodate the level of housing proposed in the emerging Local Plan.

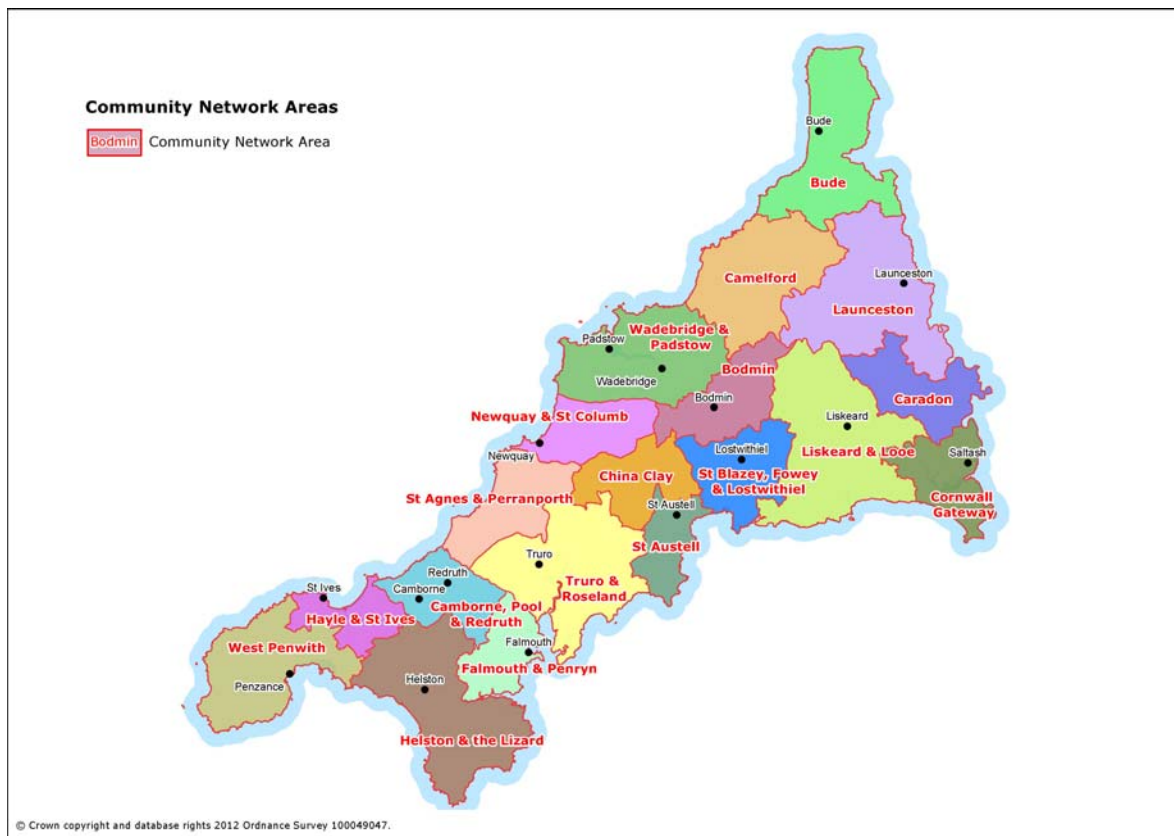

Study Area

1.5 The original SHLAA covered the main settlements of Bodmin, Bude, Camborne-Pool-Illogan and Redruth, Falmouth-Penryn, Hayle, St. Ives-Carbis Bay, Helston, Launceston, Liskeard, Newquay, Penzance-Newlyn, Saltash, St Austell-St Blaise, Torpoint, Truro and Wadebridge,

1.6 This report updates the results for these towns but also extends the study to the smaller towns and villages identified in the 'Settlements – Hierarchy and Settlement Categories Update 2012' which is available to view on the Council's website: <http://www.cornwall.gov.uk/default.aspx?page=32813>. It does not, however, include very small settlements identified as 'open countryside'.

1.7 The Cornwall Local Plan Strategic Policies – Pre-submission document published for consultation in March 2013 identifies a housing requirement for each community network area and for the main towns within these areas (see Figure 1). To ensure the results are consistent with this spatial approach the SHLAA capacity figures have been calculated on this basis.

Figure 1 Community Network Areas

Purpose of this report

1.8 The Cornwall Strategic Housing Land Availability Assessment is a study to identify all available sites within the study area which have the potential for future housing development. Its primary role is to:-

- Identify available sites with the potential for housing;
- Assess each sites' housing potential; and
- Assess when these sites are likely to be developed.

1.9 The main outcomes from the SHLAA are:

- To demonstrate the deliverability of the proposed scale and distribution of housing in the local plan;
- An explanation of the methods, assumptions, judgements and findings of the study;
- A list of sites quantifying the amount of housing that could potentially be delivered on each site;
- Maps showing the location of each site;
- The identification of constraints that could affect the delivery of the development for each site; and
- An indication of when each site is realistically expected to be developed based upon an assessment of the deliverability and developability of each site in

terms of its suitability, availability and achievability for future housing development.

Status of the Cornwall SHLAA Report & Identified Sites

The Cornwall SHLAA is not a planning decision making document. It makes broad assumptions in terms of site suitability in order to bring forward a wide range of sites for consideration of housing potential. Sites that are identified in the CC SHLAA would be required to be further tested by the planning application process including consideration of sustainability and planning criteria, development plan policies and consultation before they could be deemed suitable in planning terms.

In summary:

- The SHLAA is not development plan policy;*
 - The SHLAA does not indicate that sites will be granted planning permission;*
 - The SHLAA does not preclude sites from being developed for other suitable uses;*
- and*
- The SHLAA is an important evidence base technical document but is not a planning decision making document.*

The SHLAA does not preclude other sites which have not been submitted or assessed during this process from coming forward for housing.

Structure of the Report

1.10 The remainder of this document sets out the assessment process and key findings and is structured as follows:

Section 2: Presents the planning policy context within which the assessment has been undertaken.

Section 3: Outlines the approach to the assessment.

Section 4: Presents the key findings of the assessment.

Section 5: Draws together the main conclusions from the assessment and outlines monitoring and review mechanisms.

2. Planning Policy Context

Introduction

2.1 The purpose of this section is to set out key policy drivers which underpin the assessment of housing land availability in Cornwall.

2.2 The planning system plays an important role in delivering the development required to meet communities' needs as well as helping to protect the environment in our towns and villages and the wider countryside. The Development Plan is a key part of the system and local planning policy sets out the Council's policies and proposals for the development and use of land in the plan area. Plans are produced to control and influence the use of land in the public interest by identifying areas where development can and can not take place; setting out the criteria against which proposals will be judged, and the standards they should achieve.

National Planning Policy Framework

2.3 Published in March 2012, the National Planning Policy Framework (NPPF) distils and revises the previous raft of national planning policy guidance down into a single concise document. The policy on housing delivery takes forward the approach previously set out in PPS3 Housing (2006), but in many respects ups the ante by ensuring that councils meet the housing need in their areas and emphasises the importance of ensuring an adequate supply and choice of housing.

2.4 As with previous guidance, the NPPF advocates the efficient and effective use of land, in locations that offer good access to a range of community facilities, key services, employment opportunities and infrastructure. The importance of re-using previously development land is retained.

2.5 Whilst the government has removed the regional tier of planning guidance and devolved the responsibility for setting housing targets down to unitary and district authorities, the NPPF still sets out strong guidance on the considerations for setting housing figures.

2.6 Councils need to ensure that their Local Plans meet the '*full, objectively assessed needs for market and affordable housing in the housing market area*', identifying and updating annually a supply of deliverable sites sufficient to provide 5 years worth of housing with an additional buffer of 5% to ensure choice and competition. Where there is a persistent record of under delivery (which is not defined in more detail) an additional 20% buffer is required.

2.7 Beyond 5 years the NPPF requires Local Authorities to '*identify specific, developable sites or broad locations for growth, for 6-10 years and, where possible, for years 11-15*'.

2.8 The other major change brought about by recent reforms to the planning system is the introduction of the ability for local communities to bring forward neighbourhood plans. These have to be in conformity with the Local Plan, and whilst they can put forward higher levels of development they cannot be used as a tool to promote a lower level of provision in their area.

2.9 In planning for housing, there are a number of other key considerations that need to be taken into account. The government recognises that managing flood risk, minimising pressures on water and waste infrastructure, and conserving and enhancing green space and biodiversity are all important concerns, as is design quality for helping to create successful and sustainable places. The government considers that more homes are needed across the whole country, in both urban and rural areas.

2.10 The strategic housing role is at the heart of local authority place shaping – creating vibrant mixed communities by ensuring that the right housing, of the highest quality, is in the right place with the necessary infrastructure and support.

2.11 Local authorities are required to prepare a SHLAA to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.

2.12 Local authorities are also required to produce Authority Monitoring Reports showing how actual housing performance for the previous financial year compares to planned housing targets and policies. This will include showing how many sites from the 5 year supply of deliverable housing sites have been built upon during the year, together with a revised list of sites to maintain the 5 year supply, drawing upon those sites that are to be allocated for housing in their Local Plans. The monitoring report should set out the actions that the authority will take where it is “underperforming” compared to its housing trajectories.

Cornwall Local Plan

2.13 The Cornwall Local Plan, together with national planning policy, will provide the planning framework for development in Cornwall, setting out the Council’s planning policies for meeting the county’s economic, environmental and social aims for the future.

2.14 The Cornwall Local Development Scheme states that the Development Plan for Cornwall will comprise the following documents:

- Cornwall Local Plan Strategic Policies –

Sets out the spatial vision, objectives and strategy for the spatial development of Cornwall and strategic policies and proposals to deliver the vision for the period to 2030.

- Cornwall Site Allocations Development Plan Document – The document sets out key allocations for the main towns required to meet growth targets for the towns as set out in the Local Plan.

- Cornwall Minerals Development Plan Document – The document sets out non-strategic policy and site allocations for minerals including those for safeguarding assets.

- The Gypsy and Travelling Communities Strategy and Delivery Plan - The strategy brings together the current policies and procedures regarding developing and managing Gypsy and Traveller sites. It identifies the pitch requirements to 2020 and sets out the Council's priorities for delivery of sites.

2.15 It is anticipated that the emerging Cornwall Local Plan will be submitted for examination in 2013 having now been through Issues and Options and Preferred Approach consultations. The plan will set out the Council's policies for meeting the county's economic, environmental and social aims for the future, where this effects the development and use of land. The findings of the SHLAA will form an integral part of the evidence base for the plan.

2.16 The 'Pre-Submission' draft proposes a figure of 42,250 houses for the county over the 20 year period up to 2030. This is a significantly lower number than was being put forward in the former draft Regional Spatial Strategy which was proposing 68,200. The reduced Local Plan figure is still higher than the former adopted Structure Plan figure of around 40,000 over a 20 year period, and takes into account the implications of the recession on house building as well as local aspirations and need. Further work is being undertaken on a Strategic Housing Market Needs Assessment (SHMNA) with neighbouring authorities to better understand housing need in the sub-region this will provide the evidence base needed to inform the development of planning policy and local housing strategies.

2.17 The proposed distribution across the CNAs set out in the Local Plan Pre-Submission Draft is as follows:

Table 1: Local Plan Pre-Submission Draft Proposed Housing distribution

Community Network Area	Local Plan Pre-Submission Draft allocation 2010-2030
West Penwith: Penzance/Newlyn Remainder of CNA	1,400 1,100
Hayle & St Ives: Hayle St Ives/Carbis Bay Remainder of CNA	1,300 750 350
Helston & the Lizard: Helston Remainder of CNA	900 900
Camborne, Pool & Redruth: Camborne, Pool, Illogan & Redruth Remainder of CNA	4,000 500
Falmouth & Penryn: Falmouth – Penryn Remainder of CNA	3,200 800

Community Network Area	Local Plan Pre-Submission Draft allocation 2010-2030
Truro & Roseland Truro – Threemilestone – Shortlanesend Remainder of CNA	2,200 800
St Agnes & Perranporth CNA	1,100
Newquay & St Columb Newquay Remainder of CNA	3,000 600
St Austell St Austell Remainder of CNA	1,700 300
China Clay West Carclaze/Baal Eco-community	1,400 1,750
St Blazey, Fowey & Lostwithiel Par Docks Eco-community	800 550
Wadebridge & Padstow: Wadebridge Remainder of CNA	800 900
Bodmin: Bodmin Remainder of CNA	3,000 200
Camelford CNA	900
Bude Bude – Stratton – Poughill Remainder of CNA	800 450
Launceston Launceston Remainder of CNA	1,100 400
Liskeard & Looe Liskeard Remainder of CNA	1,000 1,000
Caradon CNA	1,000
Cornwall Gateway Saltash Torpoint Remainder of CNA	750 300 250
Total	42,250

2.18 The SHLAA is a key component of the evidence base supporting the delivery of sufficient land to meet the community's need for more housing. While the SHLAA does not in itself determine whether a site should be allocated for housing development, its evidence plays a key role in underpinning the Local Plan by helping to identify the choices available in meeting the scale and distribution of housing proposed. SHLAAs should not be seen as one-off reports. Regular updating of the findings will need to be undertaken.

2.19 In the light of the recent abolition of the South West Regional Spatial Strategy and the publication of the NPPF, which now takes precedence where the local plan is 'absent, silent or relevant policies are out-of-date', the Council has found that it is appropriate to refer to the published Cornwall Local Plan submission draft in consideration of proposals, along with other saved policies but will consider the weight to be given, particularly where there appears to be a conflict with the NPPF. It is proposed to follow the Local Plan with a site allocations document. The SHLAA evidence will have particular relevance to that document in helping identify what site specific options are available.

Summary

2.20 National planning policy requires local planning authorities to identify broad locations and specific sites that will enable continuous delivery of housing for at least 15 years from the date of adoption of a plan. Although the level of housing provision that Cornwall will be expected to accommodate is still to be finalised, the Council must continue to proactively plan for sustainable growth. In this context, the Cornwall SHLAA is a key element of the Local Plan evidence base that will support the identification of sites with potential for housing.

3. Methodology

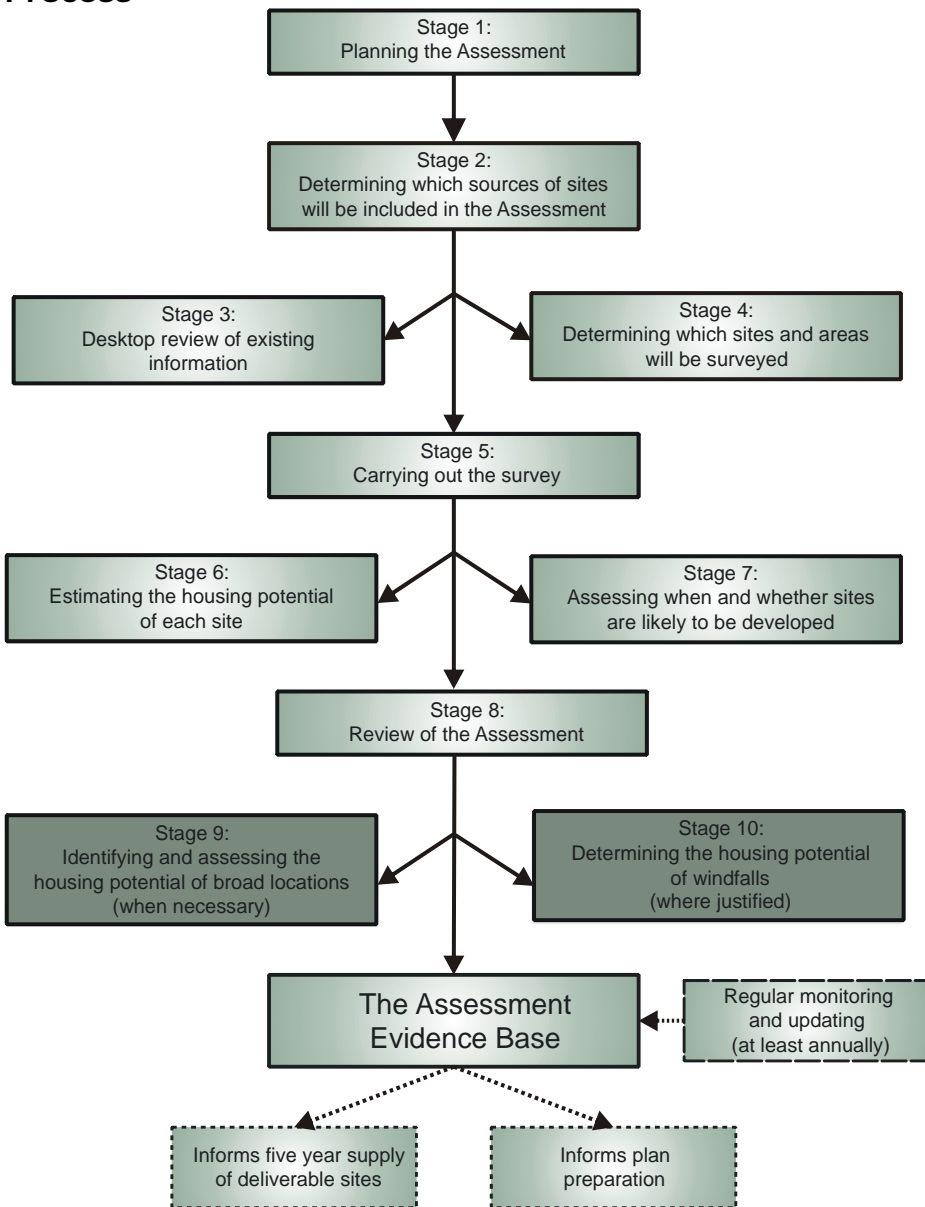

Introduction

3.1 The approach to the assessment of housing potential in Cornwall follows the Communities and Local Government (CLG) (2007) Strategic Housing Land Availability Assessment Practice Guidance which sets out the broad methodology for undertaking assessments to identify the capacity of potential housing sites within a study area.

3.2 This CLG guidance identifies eight main stages to the assessment, with two further optional stages covering broad locations and windfalls as shown in Figure 2 below.

Figure 2: SHLAA Process

Baseline

3.3 The baseline for the study is 31st March 2012, and it provides an update to the document previously produced titled 'Cornwall Council Strategic Housing Land Availability Assessment March 2011 (Base date December 2009).

3.4 The following sections explain the process undertaken in relation to the stages set out above for this assessment.

Planning the Assessment (Stage 1)

A Partnership Approach

3.5 The CLG SHLAA Guidance advocates a partnership approach to the preparation of assessments, involving key partners from the outset so that they can help shape the assessment methodology. Reflecting this guidance, the original SHLAA methodology was agreed by the former local authorities in Cornwall in November 2008 following extensive consultation including neighbouring authorities during a six week period between 15th August 2008 and 29th September 2008. This consultation comprised two key elements:

- First, the methodology was sent to key agencies, including statutory consultees, house builders, housing associations, parish councils, developers and landowners; and
- Second, the methodology was made available on each of the former LPAs' websites. Comments from stakeholders were analysed and the methodology amended as appropriate prior to formal agreement by the former district councils in November 2008.

3.6 The Council decided to make minor changes in the approach, drawing on the experience of the original study. This included undertaking an initial assessment of all sites prior to consulting with an expanded Panel who were then able to comment on both the process and the sites included before the report was finalised.

Determining the Sources of Supply (Stage 2) & Desktop Review of Existing Information (Stage 3)

3.7 A number of existing sources of information have been reviewed in order to inform the assessment and illustrate transparently the information that has been used to generate results. The existing sources of information reviewed are set out in Table 2 below.

Table 2: Capacity Sources –

Capacity Source	Origin
Planning Permissions	Outline/Full Planning Permissions (not yet delivered)
Pending applications	Pending applications
Expired Planning Permissions	Expired Planning Permissions

Local Plan Housing Allocations	Local Plan Housing Allocation
Local Plan Mixed Use Sites	Local Plan Mixed Use Allocation
Draft Area Action Plans (SHLAA1)	Truro and Threemilestone AAP
Town Framework Plan Sites (SHLAA2)	Penzance/Newlyn, Hayle, St Ives/Carbis Bay, Camborne/Pool/Redruth, Newquay, Bude, Launceston, Liskeard and Saltash Town Frameworks
Bodmin Masterplan (SHLAA2)	Bodmin Masterplan
St Austell Regeneration Plan (SHLAA2)	Regeneration Plan information
St Austell and China Clay Eco Community	Eco Community information
Affordable Housing Projects	Includes Priority Parish work and Community Land Initiative
Emerging LDF Sites from former District Councils (SHLAA1)	Council LDF Preferred Options Council LDF Preferred Options – Residential / Mixed Use Council LDF Preferred Options – Direction of future growth Regeneration Sites
Urban Capacity Sites (SHLAA1)	Urban Capacity Study (2008)
Call for Sites	Call for sites

Surveys Sites	HLA Survey 2008 National Land Use Database (NLUD) 2006 Sites Officer Knowledge OS Maps / Aerial Photographs English House Condition Survey

Planning Permissions

3.8 The schedule of planning permissions has been kept up-to-date as a part of the Council's authority planning monitoring report (AMR). As part of the review of the SHLAA any sites that have gained planning permission since the original study have been reclassified.

District Local Plan Allocations

3.9 Existing Local Plan allocations are identified in the housing trajectory (dealt with later in this report) and an assessment made of likely deliverability.

Framework Plan Documents

3.10 A key new piece of work undertaken is the preparation of 'Town Framework Plans' for the main Cornish towns together with a Regeneration Plan for the St Austell area. These used Cornwall SHLAA 2010 sites as evidence along with areas not previously assessed and further work was undertaken on deliverability in selecting sites as possible options for growth. These were included as part of the Local Plan Preferred Approach consultation. Sites identified as part of this work have been incorporated into the analysis. These non statutory plans provide part of the evidence base for the Local Plan and have been consulted on alongside the plan.

Call for Sites

3.11 The 'call for sites' gives landowners, developers and agents an opportunity to put forward sites for inclusion in the SHLAA. Letters were sent to developers, agents and specific land owners and the call for sites was advertised on the Council website and in the local press.

3.12 The original 'calls for sites' (2007-2009) for the 2011 SHLAA Report were conducted individually by the six former district councils. A new call for sites was made in January 2012 to coincide with the consultation on the Core Strategy Preferred Approach. This helped to maximise the publicity for the exercise. This call extended the coverage to the smaller settlements and rural areas and was also used as a refresh for the main towns to build on and update the original SHLAA calls for sites.

3.13 The advertised dates for each specific settlement's 'call for sites' exercises are included in Table 3.

Table 3: Call for Sites schedule

Area	Settlement	1st Call for Sites	2nd Call for Sites	3 rd Call for Sites
Penwith	Penzance/Newlyn, St Ives/Carbis Bay & Hayle	Aug 07 – Sept 07	Aug 08 – Sept 08	Jun 09 – July 09
Kerrier	Camborne/Pool/Redruth Helston	April 08 Jun 09 – Jul 09	Further sites received during AAP process 2008/2009	
Carrick	Truro Falmouth/Penryn	Dec 08 – Feb 09 Jun 09 – Jul 09	Jun 09 – Jul 09	
Restormel	St Austell/St Blazey & Newquay and rural areas* * see AHLAA in other sources	Aug 07 – Sep 07		
North Cornwall	Bodmin, Launceston, Wadebridge & Bude	Dec 08 – Jan 09		
Caradon	Saltash/Torpoint & Liskeard	Nov 08 – Dec 08		
Cornwall wide			Jan 12 – Feb 12	

Other Sources

3.14 A number of additional sources of sites with the potential for significant levels of housing capacity were also identified by the Council for inclusion within the assessment. Additional sources included Council led regeneration initiatives and programmes, eco-community development, various affordable housing led projects and initiatives, pending planning applications, sites identified as part of the existing evidence base (e.g. urban capacity studies) as well as those sites identified during street-by-street surveys. The estimated housing capacity of each of the categories was calculated using an agreed density multiplier where existing indicative capacity information was not available.

Overlaps

3.15 A number of sites have been submitted more than once as part of various studies that has taken place over time. It was important that these sites were identified to eliminate occurrences of double counting in the final SHLAA document. It was decided that if a site was submitted as part of a SHLAA call for site process

then it would be these entries that would be given priority resulting in the deletion of the duplicate sites from any other study. If a site was submitted in both the SHLAA call for sites exercise then priority here would be given to the site submitted during the second call for sites for sites exercise and the duplicate deleted from the SHLAA1 database of residual sites.

What Types of Sites and Areas Should be Considered for Housing Development (Stage 4)

3.16 There are many hundreds of settlements in Cornwall, ranging from those that are strategically significant such as Truro, through small towns and local service centres to the smallest of villages and hamlets. Many of Cornwall's towns and villages are well-placed to meet the challenges of the next few decades because they are already relatively self sustaining and contain strong communities.

3.17 Prior to undertaking detailed assessments of specific sites, it was necessary to undertake a screening exercise or "sieve" of sites in order to identify those not suitable for inclusion within the assessment. This sieve comprised the application of a site size threshold and omission of sensitive areas, consistent with the Cornwall-wide SHLAA methodology prepared by the Council. Further details of each are provided below.

Site Size Threshold

3.18 It was not considered practical to survey/assess all potential sites across the settlements of Cornwall. Consequently, in accordance with the Cornwall-wide methodology, a site size threshold of 5 units or 0.1ha was applied for the Cornwall SHLAA 2011 sites. The SHLAA Practice Guidance states that studies should take account of the nature of the area covered and its land supply along with the resources available to meet the scale of the task to the best effect. For this reason this updated SHLAA set a threshold of 10 units or 0.2ha. This change was applied to make sure the study could be resourced effectively and importantly to ensure consistency with the housing trajectories which are produced by the Council annually as the basis for calculating housing supply.

Land Excluded from the Survey

3.19 Certain sensitive areas within Cornwall were omitted from the SHLAA area of survey. These areas were primarily national designated areas that were deemed to be significantly constrained by existing policy and therefore unlikely to be suitable for residential development. The excluded areas are listed in Box 1 below and include land within a Special Areas of Conservation (SAC), Special Protection Area (SPA) and Site of Special Scientific Interest (SSSI). These designations have been excluded on the basis that national policy advises against development that would have an adverse impact on such nationally or internationally important conservation interests.

3.20 Some sites included within the assessment may be close to but not within particularly sensitive designations. In reality a site close to these sensitive locations might have a reduction in their capacity but this would require a detailed assessment which is more appropriate for the planning application stage, therefore in this study unless alternative figures have been supplied by the landowner their capacity has been assessed using the density multiplier.

3.21 Land within areas identified as Flood Risk Zone 3b was also excluded, as consistent with national policy advice that only water compatible uses and essential infrastructure should be permitted in these areas.

3.22 Consistent with the NPPF, land within the open countryside has been excluded from the SHLAA. In practice sites were included if it constituted land that was considered to be within or physically connected to a settlement as defined by the settlement hierarchy. For further information on the settlement hierarchy visit: www.cornwall.gov.uk/localplancornwall.

Box 1: Land Excluded from the Survey

Special Area of Conservation
Special Protection Area
Site of Special Scientific Interest
Flood Risk Zone 3b
Open Countryside (i.e. land not in or well integrated with existing built-up areas)

3.23 Rather than completely omit a site that lies partly within a SAC, SPA, SSSI or Flood Risk Zone 3b, it was agreed that only the site area that fell inside such designations would be used to calculate capacity. Capacity was also reduced where a site has already been partially developed.

Carrying out the Survey (Stage 5)

Desktop Review

3.24 For each site the following characteristics were recorded or checked as part of the desktop review:

- Site size;
- Site boundaries;
- Current use(s);
- Character of surrounding area and the surrounding land use(s);
- Physical constraints;
- Development progress; and
- Viability.

Data Management

3.25 For the study the boundaries of each site were digitised using a GIS system and site details entered into a database. A unique property reference number (UPRN) was assigned to both the spatial (GIS) and textual (database) information of a site. This allowed site details to be joined to the GIS boundaries and maps produced based on capacity source, capacity size and phasing.

3.26 All sites were assembled on a Community Network Area basis. If a site boundary crossed any CNA boundaries, the site was allocated to the area within which its respective settlement primarily resides.

Estimating the Housing Potential of Each Site (Stage 6)

3.27 A combination of the following methods was used to determine the potential housing capacity of each site:

- Existing information;
- Density multiplier;
- Contextual approach;
- Submission responses and
- Urban design approach.

3.28 Table 4 provides details of how the density for each specific capacity source was derived.

Table 4: Density Calculation

Capacity source	Density derived from
Planning Permissions	Existing information
Pending Applications	Submission information
Expired Planning Permissions	Density Multiplier/Contextual Approach
Local Plan Housing Allocations	Existing information/Density Multiplier/Contextual Approach
Local Plan Mixed Use Sites	Existing information/Density Multiplier/Contextual Approach
Draft Area Action Plans (SHLAA 2011)	Existing information/Urban Design Approach
Town Framework Plan Sites	Existing information/Urban Design Approach
Bodmin Masterplan	Existing information/Urban Design Approach
St Austell Regeneration Plan	Existing information/Urban Design Approach
St Austell and China Clay Eco Community	Existing information/Urban Design Approach
Affordable Housing Projects	Density Multiplier/Urban Design Approach
Emerging LDF Sites from former District	Existing information/Urban Design

Councils (SHLAA 2011)	Approach
Urban Capacity Sites (SHLAA 2011)	Existing information
Call for Sites	Density Multiplier/submission responses
Affordable Housing Land Availability Assessment	Density Multiplier
Planning Application Refusals & Withdrawals	Density Multiplier/Contextual Approach
Surplus Public Sector Land (SHLAA 2011)	Density Multiplier/Contextual Approach
Surveys Sites (SHLAA 2011)	Density Multiplier/Contextual Approach

3.29 Further information on each approach is discussed in-turn below.

Existing Information

3.30 Existing capacity information was used where this was available from sources such as outline and full planning permissions; pre-application discussions; development briefs, master plans and local housing allocations with identified indicative capacities. For some large or strategic sites, an urban design approach was used although in reality this information could be classed under 'existing information' as the urban design analyses were undertaken for sites in relation to the Area Action Plan process and existing master plans.

Density Multiplier / Contextual Approach

3.31 Where existing density information was not available, a density multiplier was applied to sites in specific geographical locations. For this study a revised set of multipliers was developed, adding a new category for rural location and slightly revising upwards the figure for the main towns as set out in Table 5.

Table 5: Density Multipliers

Within Town Centre Boundaries: 60dph – same as per SHLAA 2011

Main Towns: 50dph – increased from the 45dph in SHLAA 2011 because this was considered too low (e.g. more propensity for flats) and to allow gradation down to suburban and rural areas. The list of settlements was also expanded from the RSS “significant” towns to include those with a strategic role in the emerging Local Plan

- Truro
- Falmouth with Penryn
- Camborne
- Pool
- Redruth
- St Austell
- Newquay
- Bodmin
- Launceston
- Saltash
- Penzance

Smaller Towns: 45dph – increased from 40dph in SHLAA 2011 as this was considered too low and to allow gradation down to rural areas

- Bude with Stratton & Poughill
- Hayle
- Helston
- St Ives & Carbis Bay
- Liskeard
- Wadebridge
- Torpoint

Rural: 40dph –

- All other locations

3.32 The density assumptions presented above have been used to provide an estimate of potential housing capacity only and do not necessarily reflect the density of housing to be provided on site which will be the subject of additional examination through any allocation process and/or in support of future planning applications.

3.33 In order to determine the net developable area of sites without existing information and enable a calculation of potential capacity, a further assessment was undertaken to determine the need for, and the amount of, other infrastructure that may be required on sites of varying size, such as roads, open space, trees etc. and the calculation shown in Table 6 was applied.

Table 6: Net Developable Area

Number of Dwellings (whole site)	Area of Site Developed for Housing
Below 25 units	Whole site could be developed for housing
25 to 50 Units	85% of site (net) developed for housing
Over 50 units	70% of site (net) developed for housing

Assessing when and whether sites are likely to be developed (Stage 7)

3.34 Having calculated the capacity figure for individual sites, the next stage in the assessment was to establish whether a site can be considered deliverable, developable or not currently developable for housing development which in turn would inform assumptions with respect to when each is likely to come forward.

3.35 Box 2 provides a definition as to what constitutes deliverable, developable and not currently developable sites in the context of this SHLAA together with when such sites are expected to come forward based on the phasing set out in the NPPF.

Box 2 – Deliverability and Developability and Phasing

Deliverable – site is available now, offers a suitable location for housing development now is achievable and there is a realistic prospect that it will be delivered within 5 years and in particular that development of the site is viable.

Developable – a site should be in a suitable location for housing development, and there should be a reasonable prospect that it will be available and could be developed at a specific point in time (years 6 to 10 and where possible years 11 to 15).

Not currently developable – it is unknown when a site could be developed. This may be, for example, because of the constraints to development is severe, and it is not known when it might be overcome.

3.36 The assessment of sites involved a judgement of when and whether sites were likely to come forward for development, based on their suitability, availability and achievability. A representation of the methodology and processes involved in the classification of individual sites can be found in more detail in Table 7.

Table 7: Suitability, availability and achievability of sites

Suitability	Availability	Achievability
<p>- Policy restrictions Designations / protected areas / existing planning policy / sustainable community policy</p> <p>- Physical problems or limitations Access / infrastructure / ground conditions / flood risk / hazardous risks / pollution / contamination</p> <p>- Potential impacts Effect upon landscape features and conservation</p> <p>- Environmental conditions Which would be experienced by prospective residents</p>	<p>- Planning application/allocation</p> <p>- No legal or ownership problems Multiple ownership / ransom strips / tenancies / operational requirements of landowners</p> <p>- Interest to develop Land owner expressed an intention to develop</p>	<p>- Market factors Adjacent uses/ economic viability of existing, proposed and alternative uses in terms of land values / attractiveness of locality / level of potential market demand / projected rate of sales</p> <p>- Cost factors Site preparation relating to physical constraints / any exceptional works necessary / relevant planning standards or obligations / prospect of funding or investment to address identified constraints or assist development</p> <p>- Delivery factors Developers phasing / realistic build-out rates on larger sites / likely start and completion dates / single or multiple developers / size and capacity of developer</p>

3.37 Each stage above is described in more detail in the following sections. However, it was assumed that sites with planning permission were deliverable as their suitability had been tested through the development management process and there was a reasonable prospect that they would come forward given that planning consent had recently been sought (within the last 3 years). Similarly, existing site allocations were also considered to be deliverable as their suitability had been tested through the development plan preparation process and are tested each year through the review of the 5 year housing trajectory.

3.38 The NPPF is clear that permissions should be considered deliverable until permission expires however past trends highlight that although they may be deliverable this might not always occur within 5 years therefore a non-implementation figure of 18% has been applied to sites with permission of 9 units or fewer. This non-implementation figure was derived by examining past non-implementation rates from across the county and averaging the results to obtain a single figure. The reason a non-implementation rate has not been applied to sites

above 10 units with planning permission is because detailed discussion with developers, agents and planning officers took place to ascertain when each site is likely to commence, at what rate it will be developed and therefore when a site is expected to be completed. This therefore resulted in the discounting of those sites or part of sites that would not be expected to come forward within 5 years.

Assessing the Suitability of Sites for Housing

3.39 CLG Guidance states a site is suitable for housing if it offers a suitable location for development and would contribute to the creation of sustainable mixed used communities. It goes on to say that sites allocated in existing plans and those with extant planning permission will generally be suitable, subject to any changes in circumstances. For other sites it lists a range of factors to be considered in assessing a site's suitability:

- Policy restrictions;
- Physical problems or limitations;
- Potential impacts;
- Environmental conditions.

3.40 The methodology expands these factors, applying a two stage approach to assessing the suitability of a site. The first stage as described earlier consists of assessing sites against a range of strategic considerations (flood zone, located in open countryside etc). If a site fails the first stage, it is deemed to be an unsuitable location for housing development and does not proceed to the more detailed second stage assessment.

3.41 The second stage assessment consists of checking sites against a wider range of development factors. Those factors are:

- Physical problems or limitations, such as access, infrastructure, ground conditions (if known), flood risk, hazardous risks, pollution or contamination (if known); and
- Potential impacts on landscape features and upon conservation.

3.42 Sites that were considered to be suitable were then supplied to the SHLAA Panel so that their professional expertise and experience could add to the thoroughness and rigour of the assessments.

Assessing the Availability of Sites for Housing

3.43 The CLG Guidance states that a site is considered available when, on best information available, there is confidence that there are no legal or ownership issues. This means that a developer has expressed an intention to develop housing or a land owner has indicated an intention to sell.

3.44 There are two different tests of availability for the deliverable sites, that is for those coming forward in the first 5 years there needs to be evidence that they are available now. For developable sites, those coming forward from the sixth year onwards there needs to be evidence that there is a reasonable prospect of availability at the point envisaged. The following list explains the methods used to undertake the availability assessment of sites:

- A proforma was the principal method used to identify ownership details, legal issues and an indication of the developer or landowner's timeframe for housing delivery on a site. The proforma also requested information relating to any potential constraints that might hinder site delivery;
- As part of the SHLAA and ongoing housing trajectory work an officer contacted developers/agents with existing planning permissions to ascertain progress and timescales. If the developers/agents could not be contacted then sites were sent to Development Management officers responsible for the applications to gather their views on likely development rates and time scales; and
- As part of the review a new Panel was set up comprising a mix of landowners, stakeholders and developers (Appendix 1). The Panel were supplied details of every site identified through the call for sites for inclusion in the assessment and were asked to provide information on site availability, site constraint information and anticipated timescales in relation to housing delivery.

3.45 As the above list indicates, the process of gathering site availability information in practice continued throughout the study period in order to ensure the accuracy of information in relation to any particular site. Some sites dropped out of the SHLAA at this stage where there was no availability information and site owners were not contactable or had not replied to a letter requesting information. The scoring is being used to inform when sites will become available. Some sites have been dropped out from the detailed scoring for other reasons e.g. less than 0.2ha or in a national designation as described earlier. These sites are still held on record and can be reviewed later. A monitoring strategy is under development.

3.46 Assessing the availability of sites for housing should normally take into account the following potential legal and ownership problems, where known:

- Multiple ownerships;
- Ransom strips;
- Tenancies; and
- Operational requirements of landowners.

3.47 In the case of this study, these elements were considered where known, if and when more information becomes available it will need to be taken into account by the Council in future updates.

Assessing the Achievability of Sites for Housing

3.48 Government guidance states that the development of a site is achievable where there is a reasonable prospect that housing will be developed on the site at a particular point in time. This is essentially a judgement about the economic viability of a site and the capacity of the developer to complete and sell the housing over a certain period.

3.49 The call for sites pro-forma asks landowners or agents to supply information that helps us make an assessment on the potential 'achievability' of a site. The pro-forma required an estimate of the number of units to be built on site per annum. This

was asked on all sites and not just those with planning permission. Respondents were also asked whether there were any accessibility, market and/or cost factors, which may constrain development.

3.50 Achievability will be affected by:

- Market factors – such as adjacent uses, economic viability of existing, proposed and alternative uses in terms of land values, attractiveness of the locality, level of potential market demand and, particularly for larger sites, the projected rate of sales;
- Cost factors – including site preparation costs relating to any physical constraints, any exceptional works necessary, relevant planning standards or obligations, and the prospect of funding or investment to address identified constraints or assist development; and
- Delivery factors – including phasing, the realistic build-out rates on larger sites, whether single developer or several developers, and the size and capacity of the developer.

3.51 To supplement information supplied through the calls for sites the Council also looked at the economic viability of different areas across Cornwall.

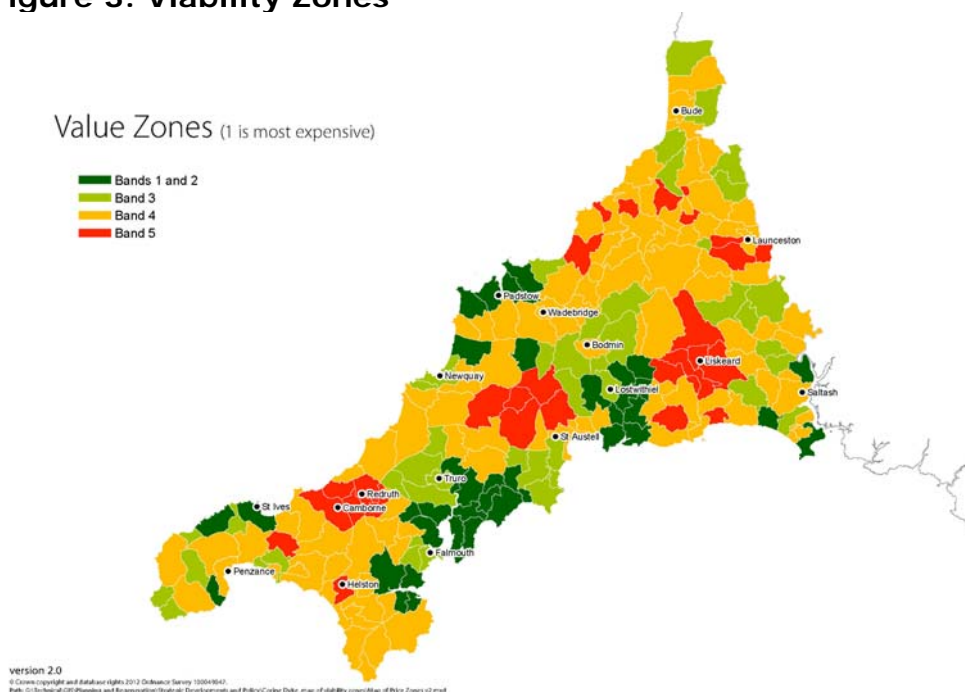

3.52 Sites submitted for SHLAA March 2011 were assessed against a model based on the six former local authority areas using the Three Dragons developed Cornwall Council's Viability Toolkit. This is a residual development appraisal model which is used by the Council (and formerly five of the six local authorities) to negotiate sites with developers and land owners.

3.53 The model is particularly helpful in carrying out this type of analysis. It is based on a range of sub market areas within each of the former local authority areas. Further information on this approach is set out in the Cornwall Strategic Housing Availability Assessment 2011 which can be viewed by visiting www.cornwall.gov.uk/shlaa.

3.54 In 2012 the Council commissioned Three Dragons and Opinion Research Services to produce a Housing Strategic Viability Appraisal (HSVA) which provides an analysis of the economics of residential development in Cornwall focusing on the impact that affordable housing and a Community Infrastructure Levy (CIL) has on development viability.

3.55 It has been prepared using the Three Dragons toolkit (consistent with SHLAA 2011) and is based on authority level data supplied by Cornwall Council, consultation with the development industry and quoted published data sources. The findings were used to assess the viability of sites in this study with those located in the high value zones scoring higher than those in the lower value areas.

Figure 3: Viability Zones

Build out rates

3.56 With specific regard to build-out rates, an industry standard rate of 100 dwellings per annum was implemented as agreed with the SHLAA 2011 Panel and to ensure consistency this was used in the update and applied to all sites meaning that the delivery of sites over 500 dwellings will extend across two phases.

Role of Stakeholders in Assessing Deliverability and Developability

3.57 The CLG Guidance sets out that stakeholders can have a key role in providing expertise and knowledge to inform the assessment of the deliverability and developability of sites and how market conditions may affect economic viability. To facilitate stakeholder input to the assessment, a SHLAA Panel was established comprising regional and local developers, a registered social housing provider, local agents and key statutory agencies including the Environment Agency, Natural England and the Highways Agency. The primary purpose of the Panel was to consider and give advice on the findings of site assessments undertaken by Council officers with respect to their deliverability and developability. The information collated from the Panel was used to further enhance the site intelligence gathered from the various investigative methods described above.

3.58 The Panel were supplied details of every site identified through the call for sites for inclusion in the assessment and were asked to provide information on site availability, site constraint information and anticipated timescales in relation to housing delivery. This electronic consultation comprised the distribution of a series of packs to all Panel members. Packs included:

- map of Cornwall showing location of all sites
- individual site map for each site;
- initial scoring showing site classifications;
- a site assessment response form; and
- a guidance note providing instruction on how to complete the site assessment response form.

3.59 The site assessment response form included a series of questions which sought to prompt responses from members relating to the suitability, achievability and availability of each site. The questions contained within the response form are summarised in Table 9 below.

Table 8: Site Response Form Questionnaire

Site Assessment Response Form	
Suitability	<p>Policy Constraints Other than national, regional and local planning policy, are there any other policy constraints likely to restrict development of the site?</p> <p>Impact of Development What impact would development of the site for housing have on the immediate surrounding area?</p> <p>Environmental and Physical Restrictions Are there any environmental conditions or physical restrictions present which could restrict development of the site?</p>
Achievability	<p>Housing Market Is there potential market demand for housing in the local area?</p> <p>Locality Is the site in an attractive location for housing?</p> <p>Preparation Costs What impacts are site preparation costs likely to have on site viability?</p> <p>Planning Obligations What impacts are associated planning obligations likely to have on the site's viability?</p> <p>Economic Viability In principle, do you consider the site to be economically viable?</p> <p>Affordable Housing Is the provision of affordable housing realistic?</p> <p>Phasing Given the scale of the site, would you envisage a phased approach to development and if so, over what period is this likely to take</p>

Site Assessment Response Form

Availability	place? Infrastructure Requirements What level of infrastructure provision would development of the site require? Density What housing density do you consider to be achievable on the site? Ownership Do you know of any legal or ownership issues which could potentially delay development of the site?
---------------------	--

3.60 The information received from Panel members during the consultation was used to inform the assessment of sites.

4. Assessment Findings

Introduction

4.1 This section of the report presents the key findings of the assessment. It begins by presenting the findings for Cornwall as a whole and, based on the outputs from the assessment, provides an indication of potential housing capacity to inform the Local Plan for Cornwall. To aid analysis, the findings are also presented by community network area and key settlements and in each case the following information sets out:

- Total number of sites;
- Total capacity; and
- Indicative phasing.

Overall Findings

4.2 The assessment indicates that in April 2013, a total of **1,124** sites within the Study Area were submitted during the latest both 'call for sites' exercises and a further 313 sites already have permission for developments of 10 or more units, which when combined may have the potential for residential development which, in total, would theoretically be capable of supporting an estimated **113,567 dwellings** over a 16+ year period.

4.3 Table 10 provides a summary of the estimated housing potential figure for Cornwall and a detailed breakdown of the main sources of capacity, site size and estimated dwelling yield. The table also shows the estimated capacity of the Study Area broken down into four time periods starting from the base date of 31st March 2012, based on the assumptions contained in Chapter 3 of the report.

4.4 It is worth noting at this point that the inclusion of a fourth phase of housing delivery was necessary to accommodate large sites of 500+ dwellings, that occupied one or more of the latter phases of development. These assumptions are based on an annual build rate of 100 dwellings.

Table 9: Summary of Results for Cornwall

Indicator	Number/Area
Total number of 'call for sites' sites	1,124 sites
Total areas of sites (call for sites)	6,067.71 hectares
Total number of Housing Trajectory Sites (10+ units) with P.P	313 sites
Total outstanding planning permissions	17,509 dwellings
Total capacity	113,567 dwellings
Phase 1 – Housing trajectory: 2013 -	14,692 dwellings

Indicator	Number/Area
2018 (years 1 -5)	
Phase 2: 2019-2023(years 6 -10)	79,928 dwellings
Phase 3: 2024-2028 (years 11 - 15)	11,198 dwellings
Phase 4: 2029+ (years 16+)	7,962 dwellings

Figure 4. Cornwall Total Capacity by Phase

Phasing & the Five Year Housing Land Supply

4.5 The approach of the SHLAA has been to split phasing into three stages: specific deliverable sites which are ready for development within years 1-5 and have been identified through work on the Council’s housing trajectory and specific deliverable sites which can be developed during years 6-10 and 11-15, and which can be drawn upon to top up the five year supply.

Phase 1 - Housing Land Supply Assessment – April 2013

4.6 There is currently no adopted housing requirement for Cornwall. This is being progressed through the Cornwall Local Plan - Strategic Policies. The pre submission Local Plan identifies a target of 42,250. The latest estimate based on the 2011 census appears to indicate a provision of about 48,000, although work is being refined as part of the Cornwall SHMNA which is due to be published shortly. This is similar to the level of provision identified in the local Plan preferred option. Once the SHMNA is published, we will update the housing supply statement.

4.7 Housing trajectories have been compiled for all sites with planning permission across the county and for each Community Network Area (CNA). The deliverability of all sites of 10 or more units have been assessed, in the majority of cases, following discussions with landowners and developers. Where this has not been possible an informed estimate has been made based upon discussions with the councils own development management officers. For sites below 10 units, an 18% discount has been applied based on past performance to allow for the likelihood that a proportion of these small sites will not be completed within 5 years.

4.8 The trajectories can be accessed by clicking on the following links:

- Cornwall Wide Housing trajectories
- Housing trajectories by CNA

4.9 The trajectories are a statement of the position as at 1st April 2013 and do not include new permissions granted since then.

4.10 Since the start of the emerging local plan period (April 2010) there have been a total of 6,714 units completed across Cornwall. With a total of 2278 units completed during 2012/13.

Housing Built on Previously Developed Land

4.11 During 2012/13, 1,249 out of the 2,278 completed units were built on previously developed land. This equates to an overall percentage of 55%, which as a proportion of the overall completions across the county is up 7% from the 48% achieved during 2011/12. Since 2010 3,419 out of the 6,714 units have been completed on PDL this equates to 51%.

Housing Commitment

4.12 As at 1st April 2013 there was planning permission for 15,520 homes of which 2,688 units were under construction, 1,182 units on small sites of below 10 units and 1,506 units on the larger sites of 10 or more units. 12,832 units have yet to be implemented and of these, 2,922 are on smaller sites and 9,910 units are on the larger sites of 10 or more units. Of the units that are unimplemented 1,030 units are on sites that have already commenced.

4.13 In addition to sites with planning permission the trajectory also provides estimates of the delivery from sites with planning permission but are awaiting a S106 agreement to be finalised and signed off, sites identified within the Strategic Housing

Land Availability Assessment (SHLAA), Cornwall Land Initiative (CLI) project and sites that are still allocated from previous development plans from across the county to gather an understanding of future potential residential yield.

Table 10: Estimated Residential Yields From The Housing Trajectory And Additional Sources			
	Years 1-5 (2013/14 -2017/18)	Years 6-10 (2018/19 – 2022/23)	Years 11+ (2023/24 onwards)
Planning Permissions	12,478	3,042	0
S106	615	944	525
Saved Local Plan Allocations	210	529	180
C.L.I Sites *	274	22	0
SHLAA **	403	79,928	19,160
Sites granted planning permission since 1 st April	712	215	0
TOTAL	14,692	84,474	27,953

* The Cornwall Land Initiative (C.L.I) is a portfolio of 11 council owned sites. The intention is to deliver all sites in partnership with a private sector partner with an anticipated delivery timeframe of 6 yrs

**please note that the SHLAA residual figures are only based on sites where no planning permission has been granted and represent a source of yield from sites with the potential to provide housing units. It is not anticipated that all of these sites will come forward and therefore the figures should not be used to estimate the likely future deliverability of residential units across Cornwall. SHLAA sites have only been included within the first five years if there are at least formal developer discussions and interest in the site or if an officer is confident that they will easily come forward within the five years.

Cornwall five year Supply – April 2013 Statement

Determining the Housing Requirement

4.14 There is currently no up to date adopted housing requirement for Cornwall. This is being progressed through the Cornwall Local Plan - Strategic Policies. The pre submission Local Plan identifies a target of 42,250. The most up to date population and household projections appear to indicate a provision of about 48,000 which is similar to the local Plan preferred option. Both these targets are therefore included in the following table.

4.15 The following table therefore sets out the five year requirement taking into account completions (6,714) since 2010 (the beginning of the plan period).

Table 11 Housing Requirements		
	Local Plan Submission Draft	Original preferred option target
	42250	48000
Less completions 2010-13 (6,714)	35,536	41,286
Annual requirement*	2,090	2,400
Shortfall**	0	486
Five year requirement***	10,450	12,486
Plus 5% buffer****	10,972	13,110
Annual requirement including uplift	2,194	2,622

* Annual requirement is calculated by subtracting completions since the start of the plan period and dividing this with the number of years remaining unless there has been an under provision against the minimum plan requirement in which case it is the minimum annual plan provision.

** The shortfall is the difference between the minimum expected completions since the beginning of the plan period less actual completions

***The five year requirement is the annual requirement multiplied by 5 plus any shortfall on the assumption that any shortfall should be made up within the next five years rather than over the remainder of the plan period.

**** When determining the uplift percentage for the five years supply the Council compared housing delivery against the last adopted development plan for Cornwall which is the Structure Plan 2001-2016 (1,970 units per annum) which has been regularly surpassed with building rates since 2001 averaging 2478 between 2001 and 2013, which is the reason why the 5% uplift was applied. Performance has therefore been assessed against targets in the policy document that was being applied at the time. A 5% buffer has therefore been applied.

Determining the Supply

4.16 The housing supply in Cornwall used to assess the five year supply is made up of the following components:

1. Houses with planning permission and under construction on sites below 10 units adjusted to allow for an 18% reduction for non delivery in five years.
2. Housing with planning permission and under construction on sites of 10 or more units adjusted following discussions with developers, landowners and council officers to determine when a site is likely to commence and at what rate.
3. Housing with planning permission on sites of 10 or more that are awaiting the signing of a S106 agreement.
4. This year for the first time we are also looking at other sites with no planning permission, such as certain SHLAA and Town Framework sites and sites identified as part of the Cornwall Land Initiative (CLI). Further details and justification relating to these type sites are contained within this report.

4.17 There were a total of 4,104 homes with permission on sites below 10 of which after applying an 18% discount 3,365 are expected to be developed within 5 years. There is planning permission for 11,416 houses on sites of 10 or more of which 9,113 are expected to be delivered within five years. Sites granted planning permission but that are awaiting S106 agreements to be signed have been assessed and of the 2,084 dwellings from this source 615 are expected to be delivered in five years. In total therefore there are 17,509 (including sites with permission subject to S106) homes with permission of which 13,093 are expected to come forward within five years.

Additional Site Sources

4.18 In the last year the council has been proactive in seeking to increase the supply of housing. There are therefore additional sites currently without permission that are likely to provide additional homes within the next 5 years. These include sites that are part of the Cornwall Land Initiative, certain SHLAA sites and certain town framework sites where there is evidence that they are likely to come forward. Whilst in the past only sites with planning permission have been included in the 5 year supply in order to take a conservative approach, as part of the council actively seeking to bring forward sites to increase supply it has obtained evidence on the deliverability of additional sites to enable it now to include these additional sources.

Cornwall Land Initiative Sites

4.19 The Cornwall Land Initiative sites are predicted to bring forward a total of 296 units, 274 of which are likely to be within five years, 17 units already have planning permission. Details of these sites can be found within the Council's Housing Trajectories. These sites are being actively promoted by the Council, are available now and are suitable for development, furthermore they have a variety of developer commitment, and as a result we are confident that these sites are viable and will come forward and as a result are included, where appropriate, within the five year supply calculation above. This is inline with Para 47, footnote 11 of the NPPF.

Saved Local Plan Allocations

4.20 There are still a few residual housing allocations remaining from the former district councils, all of these sites are considered suitable, viable and deliverable. Out of the 919 dwellings from this source 210 are considered deliverable within five years. A summary of this provision can be found on the table showing housing position as at April 1st 2013 all sources below and detailed projections are contained within the housing trajectories.

SHLAA Sites

4.21 SHLAA sites are considered capable of delivering 403 dwellings within five years. Such sites should be included within the five year land supply calculations. The sites that have been identified are within the urban boundaries of the main towns, considered to be viable, available and deliverable, in most cases there is direct developer interest and active discussions with the Council. Certain sites, at the time of writing, have planning applications being prepared with the aim of submitting them in the very near future. As a result of this it is considered reasonable to include these with five year land supply calculations. Details of these sites can be found within the housing trajectories for the main towns.

Town Framework Sites

4.22 In some circumstances evidence suggests that certain emerging Town Framework sites are likely to come forward within five years. A yield of 1085 dwellings is likely from these sites. Such sites have not been included within the five year land supply calculations but do provide an additional source of potential housing supply. In most cases there is direct developer interest and active discussions with the Council. Certain sites, at the time of writing, have planning applications being prepared with the aim of submitting in the very near future. Details of these sites can be found within the housing trajectories for the main towns

Sites in the planning system since 1st April

4.23 Due to the time delays between the 1st April and time of publication there have been a few large sites that have been granted planning permission since 1st April 2013 and are therefore considered suitable, viable and deliverable within five years and therefore should be included. These sites account for 927 dwellings of which 712 are considered deliverable within 5 years. Details of these sites are contained in Table 12.

Table 12: Additional sites since April 2013.				
Town /CNA	Site	Units	No. likely within 5 years	Evidence
Falmouth	Lower Kergilliack Farm, Bickland Hill	300	300	Application approved and rates reflect developer commitments
Launceston	Land SE Pennygillam Industrial Estate	275	60	Application approved and rates reflect developer commitments
St Austell	Land W of Porthpean Road	126	126	Application approved and rates reflect developer commitments
Truro	Former Richard Lander School	226	226	PA12/10941 approved after 1/4/13 so not on trajectory – start on site is imminent. Anticipated to be a 3 year build out
Total Yield		927	712	

NB: These sites are not included in the Housing Trajectories from the 1st April but will be included in any subsequent updates.

Five Year Housing Position taking into account additional sources

Table 13: Housing Position as at April 1st 2013		
Source	Total dwellings	Expected yield 2013-18
Homes with permission on small sites (<10 units)	4,104	3,365
Homes with Planning permission on sites of 10 or more	11,416	9,113
Sites awaiting S106s	2,084	615
C.L.I sites (no pp)	296	274
Former Local Plan Allocations	919	210
Identified SHLAA sites within town urban area*	1,522	403
Sites in planning process since 1 st April and time of publishing	927	712
Total	28,494	14,692

* Only SHLAA sites that are considered to be developable or part developable within 5 years have been included.

The Five Year Supply Position

4.24 The estimated supply likely to be delivered within 5 years (14,692) can now be compared to each of the 5 year requirements of 10,972 and 13,110 as set out in Table 2 above to give a five year supply position. The fact that the supply of 14,692 is greater than both the higher and lower requirement means there is a five year supply under both scenarios.

4.25 This equates to **6.7 years supply against the lower Local Plan target and a 5.6 years supply against the higher target.**

4.26 This is calculated by dividing the total number of units expected within five years (14,692) by the annual requirement (including 5% uplift) which gives the number of years supply as follows: 14,692 divided by 2194 (table 2 above) equals 6.7 for the lower provision and 14,692 divided by 2622 (table 2 above) equals 5.6. As stated above in paragraph 5.3, whilst not included in the five year supply, there is the potential for a further 1085 dwellings to be delivered within 5 years on some town framework sites.

Table: 14: Housing Supply April 2013		
	Local Plan Submission Draft	Original preferred option target
	42250	48000
Five Year Requirement (Table 2)	10,972	13,110
Annual requirement (Table 2)	2,194	2622
5 Year Supply (Table 4)	14,692	14,692
Years Supply (5 year supply divided by annual requirement)	6.7 Years	5.6 Years

4.27 The housing numbers that count towards supply are based upon the position as at April 2013. In assessing the adequacy of the housing supply at any given time it will be necessary to take into account new permissions granted since date of publication and how many of these new homes are likely to be delivered within five years.

Affordable housing

4.28 During 2012/13 a total of 2,278 units have been completed, 652 (28.62%) of these completions have been affordable units. There has been a decrease in the number of affordable complete during 2012/13 compared with 2011/12 which in turn has led to the total proportion of affordable units as a percentage of the total completions decreasing by 1.7%. The affordable total of 652 differs from the total 741 identified by the affordable housing providers as the figures only includes units delivered via the planning process.

4.29 Of the 15,425 homes either with planning permission or not started, 3,058 or 20% are affordable homes.

4.30 The following table shows the proportion of affordable completions within the Cornwall wide figures.

Table 15: Affordable Housing completions as a proportion of total completions as at April 2013			
	Affordable Housing Completions	Total Housing Completions	Percentage %
2001-02	235	2485	9.46
2002-03	268	2639	10.16
2003-04	283	2183	12.96
2004-05	368	2495	14.75
2005-06	395	2084	18.95
2006-07	358	2612	13.71
2007-08	708	3179	22.27
2008-09	738	2877	25.65
2009-10	788	2473	31.86
2010-11	704	2060	34.17
2011-12	718	2375	30.23
2012-13	652	2278	28.62

Phase 2 – 2019-2023 (Years 6-10)

4.31 Sites with a limited level of constraints such that they are likely to be available for delivery after the first 5 years were placed into Phase 2. These 'developable' sites are suitable for development, depending on their individual circumstances and on specific measures being proposed to overcome any minor constraints. It should be noted that although the results show a potentially large capacity capable of coming forward it is not envisaged that all will come forward during this phase and sites might contribute to yield in another phase instead.

Phase 3 – 2024-2028 (Years 11-15)

4.32 Sites allocated to Phase 3 have more significant constraints. These sites are still considered appropriate for development but have a longer lead-in time in which to deal with constraints which could relate to suitability, availability or achievability factors, or a combination thereof. This phase also includes overspill from sites over 500 units or where the consultee has advised delivery will occur in this timeframe.

Phase 4 – 2029+ (Year 16-20)

4.33 Sites contained within Phase 4 are typically large sites where overall capacity exceeds delivery during the previous timeframes. These are based on an industry standard rate on individual sites of 100 dwellings per annum as agreed with the SHLAA 2011 Panel. This also includes sites where the consultee has stated this is the case.

Table 16: Cornwall Capacity by Phase (Local Plan Comparison)

Phase	Cornwall SHLAA	Local Plan Target 2010-2030	Indicative difference
Phase 1 2013 – 2018 (Years 1-5)	16,143	10,563	+5,580
Phase 2 2019-2023 (Years 6-10)	79,928	10,563	+69,162
Phase 3 2024-2028 (Years 11-15)	11,198	10,563	+635
Phase 4 2029+ (Years 16+)	7,962	10,563	-2,2601
Totals	115,238	42,250	+72,775

¹ Based on Local Plan annual target of 2,113 per annum.

² Note that the Phase 4 Local Plan target relates to years 16 to 20 whilst delivery of potential identified capacity in Phase 4 may extend beyond year 20.

NB: This table does not include the 6,714 units completed between the Local Plan base date of April 2010 and the base date of the SHLAA of April 2013.

Figure 5: Sources of potential housing capacity:

Community Network Areas

4.34 For administrative purposes the Council has split Cornwall into 19 separate Community Network Areas. These are geographical areas which follow the boundaries of existing town and parish councils. This approach has been used by the Local Plan in allocating housing growth. In order to provide a more detailed insight of potential housing capacity across Cornwall, the following table sets out a breakdown of the results presented above for each community network area and settlements with a Local Plan housing target.

Table 17: Capacity by Community Network Area – SHLAA Sites

NB: the sites in brackets represent potential additional housing yields from additional sources (Cornwall Land Initiative, Town Frameworks and planning permissions since April 2013) as identified by the housing trajectories but are not included in the overall SHLAA totals. When split into phases these sites potential yield totals: Phase 1 – (2010-2018) = 1,085; Phase 2 – (2019-2023) = 13,051; Phase 3 – (2024-2028) = 6,536; Phase 4 – (2029 +) = 1,979

5. Conclusions

5.1 The SHLAA has been carried out having regard to relevant practice guidance published by government, and a stakeholder partnership has participated in shaping the SHLAA methodology and refining the site assessments.

5.2 The pool of sites was established through a number of sources including sites already with planning permission and sites put forward by landowners or developers who wish their development potential to be considered. Decisions as to which sites should be allocated will be made as part of the plan making process.

5.3 The key conclusions are:

- At the time of preparing the SHLAA, a housing requirement of **42,500 dwellings between 2010 and 2030** has been agreed by the Council. This equates to a **five year requirement of 14,692 for years 1 to 5**.
- Our up to date assessment identifies **deliverable sites for 16,143 dwellings**. This equates to **6.7 years housing supply**, including a 5% buffer.
- Assessed potential from all identified sites shows **capacity for 105,318 additional homes over the period 2013 – 2028**.
- An additional potential of **7,962 homes were identified post 2029**.
- There is **a significant surplus in potential supply exists** across all 5 year time bands up to 2028.

5.4 In conclusion the Strategic Housing Land Availability Assessment process shows evidence that there are sufficient potential housing sites to meet the Cornwall's requirements of 42,250 (net) new houses over the Plan period to 2030. Therefore it is not necessary to investigate whether to identify broad locations for future housing growth (step 9), and / or the use of a windfall allowance (step 10).

5.5 It is important to emphasise that the SHLAA process is part of the evidence base for the emerging Local Plan. Decisions in terms of allocating sites to meet the housing requirements for Cornwall will take place through the Local Plan and not through the Strategic Housing Land Availability Assessment. For further information on the Local Plan please refer to the Council's website www.cornwall.gov.uk/localplancornwall.

Review and Monitoring of the SHLAA

5.6 It is also important to recognise that the SHLAA process is not a static process and as a result the SHLAA should be subject to a periodical review. Actual housing delivery across Cornwall is monitored annually and the SHLAA should be reviewed, updated and amended to reflect this. The results of such a review will be published as part of the Authority Monitoring Report. In addition to the annual housing land availability assessment the Council produced a set of housing trajectories that contain detailed expected delivery rates for sites with 10+ units that have been

granted permission and sites awaiting the signing/finalisation of S106 agreements. The rates have been informed by discussions with developers, landowners, agents and development management staff, the results of which will form the SHLAA yield for years 1-5.

5.7 Review of the housing trajectories and the Strategic Housing Land Availability Assessment involves:

- Check the development status of all identified sites that had planning permission, remove from the later SHLAA yields as they will be shown in the housing trajectory.
- Check to ascertain if sites without planning permission have now been approved, if planning permission has been granted then move into the 1-5 year period and add to trajectories with their relevant SHLAA reference number. If no planning permission has been granted the site will remain in the assessed SHLAA timescale unless additional evidence has come forward to suggest otherwise – this will be completed when updated housing land availability data becomes available to ensure the most up-to-date data is available. Details of sites with capacity for 10+ units can be obtained direct from the housing trajectory.
- If permission has been granted on part of a larger site identified within the SHLAA the remainder of the site will need to be reassessed to see if the granting of permission will have an effect on the suitability/deliverability of the remainder of the site. Site capacity will also need to be amended to take into account any permission granted.
- Allocations within the SHLAA with no planning approval will remain where they are in the SHLAA timeline.
- Once the review of sites has been completed the SHLAA tables will be amended showing the predicted housing capacity identified from the update.
- This review will also provide the opportunity for additional sites to be added to the SHLAA.

5.8 In reviewing the SHLAA we will also be providing all interested parties with the opportunity to provide any updates to the sites to enable further assessment of the developability and deliverability of the sites.
